

MOUNT CEPH FS IN YOUR FILE SYSTEMS TABLE

If you mount Ceph FS in your file systems table, the Ceph file system will mount automatically on startup. To mount Ceph FS in your file systems table, add the following to `/etc/fstab`:

```
{ipaddress}:{port}:/ {mount}/{mountpoint} {filesystem-name} [name=username,secret=secretkey]
```

For example:

```
10.10.10.10:6789:/ /mnt/ceph ceph name=admin,secretfile=/etc/ceph/secret.key,noatime
```

Important: The name and secret or secretfile options are mandatory when you have Ceph authentication running. See [for details](#).
