

TESTING NOTES

BUILD-INTEGRATION-BRANCH

SETUP

1. Create a github token at <https://github.com/settings/tokens> and put it in ~/.github_token. Note that only the public_repo under the repo section needs to be checked.
2. Create a ceph repo label *wip-yourname-testing* if you don't already have one at <https://github.com/ceph/ceph/labels>.
3. Create the ci remote:

```
git remote add ci git@github.com:ceph/ceph-ci
```

USING

1. Tag some subset of *needs-qa* commits with your label (usually *wip-yourname-testing*).
2. Create the integration branch:

```
git checkout master
git pull
../src/script/build-integration-branch wip-yourname-testing
```

3. Smoke test:

```
make && ctest -j12
```

4. Push to ceph-ci:

```
git push ci $(git rev-parse --abbrev-ref HEAD)
```
