

PURGE A HOST

When you remove Ceph daemons and uninstall Ceph, there may still be extraneous data from the cluster on your server. The `purge` and `purgedata` commands provide a convenient means of cleaning up a host.

PURGE DATA

To remove all data from `/var/lib/ceph` (but leave Ceph packages intact), execute the `purgedata` command.

```
ceph-deploy purgedata {hostname} [{hostname} ...]
```

PURGE

To remove all data from `/var/lib/ceph` and uninstall Ceph packages, execute the `purge` command.

```
ceph-deploy purge {hostname} [{hostname} ...]
```
