KEYS MANAGEMENT

GATHER KEYS

Before you can provision a host to run OSDs or metadata servers, you must gather monitor keys and the OSD and MDS bootstrap keyrings. To gather keys, enter the following:

```
ceph-deploy gatherkeys {monitor-host}
```

Note: To retreive the keys, you specify a host that has a Ceph monitor.

FORGET KEYS

When you are no longer using ceph-deploy (or if you are recreating a cluster), you should delete the keys in the local directory of your admin host. To delete keys, enter the following:

```
ceph-deploy forgetkeys
```
